

CLOUD

All of our solutions are fully managed and located in our private Mortgage Cadence Cloud, providing our clients with unique, dynamic scaling capabilities combined with a lower ongoing total cost of ownership.* We have vast experience providing Software as a Service (SaaS) solutions since 1999 and a track record of providing these services to hundreds of clients.

DEPLOYMENT AND UPGRADE EASE

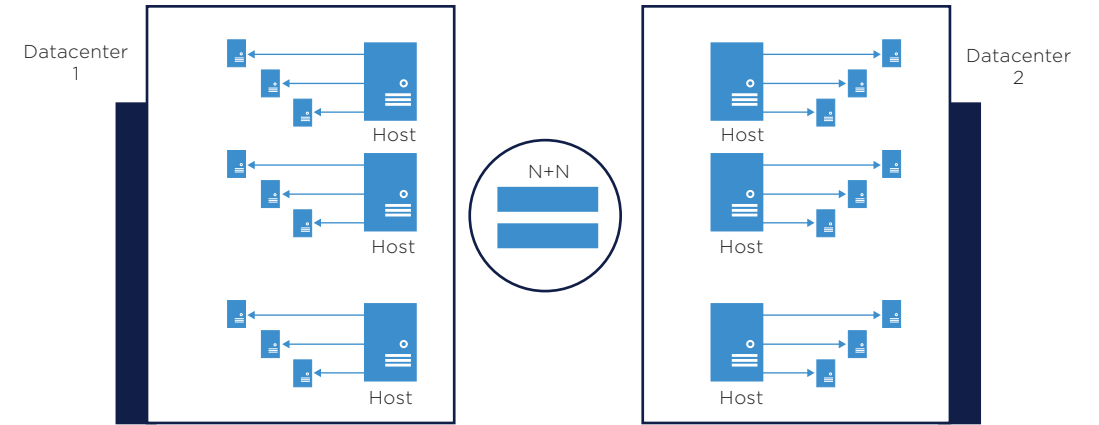

Mortgage Cadence efficiently applies upgrades with ease, giving our customers access to our latest capabilities even faster. We utilize a unique template process whereby the entire platform's operating system is packaged and migrated between deployment environments - drastically increasing the reliability and decreasing the time it takes to go through the process of launching new deployments within our SaaS offerings.

SECURITY ASSURANCE

Benefits of our product suite include the security of a single tenant environment with the flexibility and cost-savings of a multi-tenant offering. In addition, Mortgage Cadence utilizes AT101- SOC2 audited third party infrastructure hosting providers for the provisioning of our application suite. Mortgage Cadence also maintains internal policies and procedures consistent with ISO 27001, which forms the basis for our ISO27001:2013 certification by the British Standards Institute.

* Mortgage Cadence also offers an on-premise deployment option. Please see your sales representative for more details.

STATE OF THE ART PRIVATE CLOUD INFRASTRUCTURE TO DELIVER IN AN N+N ARCHITECTURE

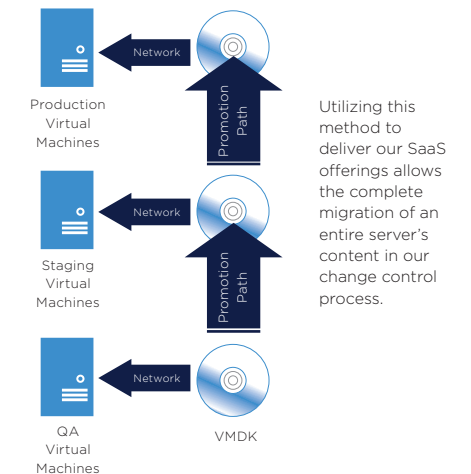

Mortgage Cadence utilizes highly progressive technologies, leveraging multiple datacenters and the latest in provisioning and virtualization technologies - all backed by Cisco®- and NetApp®-certified infrastructure. Our datacenters are also N+1 redundant, which means that all components have at least one independent backup component, giving you assurance that the system will be available when you need it.

OUR SOFTWARE AS A SERVICE (SAAS) OFFERINGS HELP YOU EXPERIENCE:

- Low implementation costs
- Fast deployment times
- Improved hardware redundancy
- Increased environmental flexibility
- Increased system stability

UNIQUE OPERATING SYSTEM DEPLOYMENT

Utilizing this method to deliver our SaaS offerings allows the complete migration of an entire server's content in our change control process.
