

# ARCHITECTURE

The Loan Fulfillment Center is a powerful and flexible platform built on a sturdy foundation. Its multi-tiered architecture, consisting of database, web services, and presentation layers, provides a user-friendly interface paired with stability and consistency.

## IMPLEMENT QUICKLY

The Loan Fulfillment Center is designed in a way that is easy to install, configure and deploy. All services are hosted on servers configured specifically for the application. A mature baseline configuration seasoned over a decade of experience provides your team and ours a head-start on configuration.

## SCALE EASILY

The Loan Fulfillment Center utilizes server virtualization and leverages sophisticated load balancing techniques that scale with your growth. Our powerful architecture quickly shifts traffic from server to server, increasing and reallocating resources with ease, letting you focus on lending rather than managing technology.

## ASSURANCE WITH REDUNDANCY

Our customers and their borrowers access the Loan Fulfillment Center securely over the internet. All Mortgage Cadence technologies reside in our proprietary cloud, built for reliability, stability and redundancy.
