

CLOUD

All of our solutions are fully managed and located in our private Mortgage Cadence Cloud, providing our clients with unique, dynamic scaling capabilities combined with a lower ongoing total cost of ownership. We have vast experience providing Software as a Service (SaaS) solutions since 1999 and a track record of providing these services to hundreds of clients.

SECURITY ASSURANCE

Benefits of our product suite include the security of a single tenant environment with the flexibility and cost-savings of a multi-tenant offering. In addition, Mortgage Cadence utilizes SSAE16-SOC2 audited third party infrastructure hosting providers for the provisioning of our application suite. Mortgage Cadence also maintains internal policies and procedures consistent with ISO 27001, which forms the basis for our ISO27001:2013 certification by the British Standards Institute.

STATE OF THE ART PRIVATE CLOUD INFRASTRUCTURE TO DELIVER IN AN N+N ARCHITECTURE

Mortgage Cadence utilizes highly progressive technologies, leveraging multiple datacenters and the latest in provisioning and virtualization technologies - all backed by Cisco®- and NetApp®-certified infrastructure. Our datacenters are also N+1 redundant, which means that all components have at least one independent backup component, giving you assurance that the system will be available when you need it.

OUR SOFTWARE AS A SERVICE (SAAS) OFFERINGS HELP YOU EXPERIENCE:

- Low implementation costs
- Fast deployment times
- Improve hardware redundancy
- Increase environmental flexibility
- Increase system stability
